This analysis is directed at the general automotive service technician who must possess a thorough knowledge of the assemblies, systems, and components of motor vehicles and light trucks in order to be able to diagnose, service, repair, rebuild, or replace them. The analysis identifies tasks and sub-tasks performed by a general automotive service technician, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, work practices and procedures, engines, systems, components, and body hardware. For each task, the document outlines the element of skill and knowledge that an individual must acquire to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The appendix includes a list of tools

and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).
