**What Does Rain Smell Like?** - Simon King 2019-10-17

'Clear, succinct and engaging answers to every question you could ask about the weather.' Gavin Pretor-Pinney, author of *The Cloudspotter's Guide* Why doesn't rain fall all at once? Can technology change the track of a hurricane? What's the weather like on other planets? Meteorologists Simon King and Clare Nasir reveal the captivating ways the weather works, from exploring incredible weather phenomenon (how are rainbows formed?), expertly breaking down our knowledge of the elements (could we harness the power of lightning?) to explaining the significance of weather in history (has the weather ever started a war?) and discussing the future of weather (could climate modification save the planet?). In *What Does Rain Smell Like?* Simon and Clare uncover the thrilling science behind a subject that affects us all. They unearth and analyse all aspects of the weather and how it changes our lives through answering our most curious questions about the world around us.

[Introduction to Geophysical Fluid Dynamics](#) - Benoit Cushman-Roisin 2011-08-26

Introduction to Geophysical Fluid Dynamics provides an introductory-level exploration of geophysical fluid dynamics (GFD), the principles governing air and water flows on large terrestrial scales. Physical principles are illustrated with the aid of the simplest existing models, and the computer methods are shown in juxtaposition with the equations to which they apply. It explores contemporary topics of climate dynamics and equatorial dynamics, including the Greenhouse Effect, global warming, and the El Nino Southern Oscillation. Combines both physical and numerical aspects of geophysical fluid dynamics into a single affordable volume Explores contemporary topics such as the Greenhouse Effect, global warming and the El Nino Southern Oscillation Biographical and historical notes at the ends of chapters trace the intellectual development of the field Recipient of the 2010 Wernaers Prize, awarded each year by the National Fund for Scientific Research of Belgium (FNRS-FNRS)

**The Global Climate** - John T. Houghton 1985-09-05

Now in paperback, this book has succeeded in its aim to introduce the global climate problem and the complex processes and interactions which play a part in climatic change to a wide range of scientists working in climatic research or the related fields of meteorology, oceanography, glaciology and hydrology. It is centred around the World Climate Research Programme, an international enterprise jointly sponsored by the scientific community (through the International Council of Scientific Unions) and the national weather centres (through the World Meteorological Organisation). If progress is to be made in understanding climatic change, it is necessary to observe and understand all

components of the climate system and the interactions between them.

This book is particularly relevant to many contemporary climatic problems and to the two most important questions arising from them: to what extent can changes in climate be predicted; and what is the extent of man's influence on climate. The *Global Climate* answers these questions, showing how the important processes may be observed, evaluated and modelled by computer.

**Threats, Risks and Sustainability - Answers by Space** - Kai-Uwe Schrogl 2009-07-24

Development is challenged by, at least until 2050, a strong population, more severe environmental strains, growing mobility, and dwindling energy resources. All these factors will lead to serious consequences for humankind. Inadequate agricultural resources, water supply and non renewable energy sources, epidemics, climate change, and natural disasters will further heavily impact human life. The European Space Policy Institute (ESPI) sheds a new light on threats, risks and sustainability by combining approaches from various disciplines. It analyzes what could be the contribution of space tools to predict, manage and mitigate those threats. It aims at demonstrating that space is not a niche but has become an overarching tool in solving today's problems.

Weather - Clare Oliver 2014-08-01

For anyone who has ever wondered why it can be freezing one day and scorching-hot the next day, this book has the answers as well as many other facts. Presented in the format of 100 interesting pieces of information, Earth's atmosphere is explained as well as various kinds of precipitation, the water cycle, and extreme weather events. Weather phenomena such as fogbows, rainbows, and moonbows are also included in this beneficial addition to an earth-science library.

**Understanding Earth** - John Grotzinger 2010

Chapter-by-chapter help for studying and exam review, with lots of support for working with the book's media resources.

Design Engineering Refocused Hanif Kara 2016-09-23

The contents of the book will highlight the differences between the design and engineering disciplines - strengths and flaws. It will also illustrate examples of interdisciplinary interactions. Any false dichotomies will be revealed and the many non-linear processes borne out of challenging conventions between traditional and new modes of practice will be revealed. Projects based on a body of experience spanning many years will be selected to support experimentation that goes beyond an undisciplined search for originality, innovation and creativity. In addition to writings from Hanif Kara and Daniel Bosia contributions will be sought from specialists in the field who have played a role in the operations of P.art® at AKT II - past and present - qualifying them to disseminate and distribute a particular form of 'knowledge'. Features work of architectural practices: Adjaye Associates, Foster + Partners, Heatherwick Studio, HOK, Serie Architects, Wilkinson Eyre Architects and Zaha Hadid Architects. In addition to AKT II, it will encompass the work of engineers and engineering consultants such as: Arup, Cecil Balmond, Buckminster Fuller, Buro Happold, Pier Luigi Nervi and Peter Rice.

Instructor's Manual to Chris Park's The Environment - Greg Lewis 2012-11-12

The very survival of the planet is at risk: human misuse of natural resources and disturbance of natural environmental systems is pushing the Earth to the limits of its capacity. The Environment is a lively, comprehensive introduction for environmental study, explaining how the environment functions, how environmental systems relate, and the ways in which people and environment interact. Focussing particularly on the environmental impacts of human activities, the book explains the ways in which an understanding of basic physical principles can help us to use the environment and its resources. Three particular approaches are adopted throughout: \* a systems approach - highlighting the interactions and interrelationships between the environment's diverse parts \* an interdisciplinary perspective - stepping back from individual subject focus to examine the complex breadth of the environment's diversity \* a

global perspective - incorporating stimulating examples drawn from around the world to illustrate broad global patterns and contrasts. The Environment explains the principles and applications of the different parts of the Earth's system: the lithosphere, the atmosphere, the hydrosphere, and explains the interrelationship across these systems. It explores the present environmental crisis, examines how the planet Earth fits into the wider universe, and explores human-environment interactions, to offer a clear understanding of the diverse and complex environment we live in and new ways of thinking about the way it is changing. Specific features include: \* Lively, stimulating and accessible text \* Superb illustrations: 4-colour plate sections \* Case studies drawn from around the world, boxed within the text \* Chapter summaries \* Annotated further reading lists A Lecturer's Manual is available to accompany the text

**Climate Change Science** - John C. Mutter 2020-05-19

How will future climates be different from today's world--and what consequences will changes in climate have for societies and their development strategies? This book is a primer on the essential science for grasping the workings of climate change and climate prediction. It is accessible for readers with little to no background in science, with an emphasis on the needs of those studying sustainable development. John C. Mutter gives a just-the-facts overview of how the climate system functions and what we know about why changes occur. He recounts the evolution of climatology from the earliest discoveries about Earth's climate to present-day predictive capabilities, and clearly presents the scientific basis of fundamental topics such as climate zones, ocean-atmosphere dynamics, and the long-term cycles from glacial to interglacial periods. Mutter also details the mechanisms of climate change and the ways in which human activity affects global climate. He explains the science behind some known consequences of rising temperatures, such as sea level rise, hurricane behavior, and climate variability. The primer discusses how climate predictions are made and examines the sources of uncertainty in forecasting. Climate Change Science is a straightforward and easy-to-read treatment of the fundamental science needed to comprehend one of today's most important issues.
