**Kala Azar in South Asia** - T.K. Jha 2011-01-05

Therapeutic regimens for visceral leishmaniasis (also Kala-azar, Dum-dum fever or black fever), caused by parasitic protozoa of the Leishmania genus, evolve at a pace never seen before. Spread by tiny and abundant sand flies, the parasite infects internal organs and bone marrow and if left untreated will almost always result in the death of the host. In developing countries successful diagnosis and treatment are complicated by asymptomatic cases, undernutrition and Kala-azar/HIV co-infections. This book brings together world-renown experts writing state-of-arts review on the progress in diagnosis and treatment of visceral leishmaniasis, ultimately leading to the complete elimination of this fatal disease from South Asia. The chapters provide valuable information for disease control as well as therapy and the diagnostic improvements necessary for early treatment, subclinical detection and drug-resistant cases. The presented methods allow for points-of-care testing in the endemic area, enabling rapid detection in resource-poor settings with easy handling and low costs. This book provides essential information for scientists, medical practitioners and policy makers involved in the diagnosis, treatment and elimination of Kala-azar.

Behavioral and neuroscientific analysis of economic decision making in animals - Tobias Kalenscher

The experimental analysis of animal behavior has a rich tradition in psychology, behavioral ecology and many other scientific branches dedicated to the study of decision making. However, it has never enjoyed a similar popularity in economics. This has recently changed with the dawn of neuroeconomics - a discipline combining the analytic and experimental tools of psychology and economics with the technologies available in neuroscience to unravel the neurobiological mechanisms underlying economic behavior. Since many of the sophisticated neuroscientific techniques can only be used on animals, neuroeconomists have come up with a large and ever-growing repertoire of animal models to probe economic decision making. Besides the value of using animals as model systems to emulate human economic behavior, the discipline of animal economic decision making exists in its very own right: an abundance of animal species at various evolutionary stages show behavior that complies with many of the predictions of economic theory, whilst, at the same time demonstrating violations of optimal choice models that are reminiscent of similar anomalies found in human behavior. Hence, the analysis of animal choice does not only offer insights into the evolutionary origins of economic decision making, it also testifies that the analysis of animal behavior is a convenient, economical and sound way to test competing economic decision models in optimally controlled experimental environments, to probe their neural

implementation and to yield common denominators in choice behavior. In short, economic theory provides more than just an alternative language to describe animal psychology: its combination with biology, psychology and neuroscience gives way to synergy effects that open up new venues for studying economic choice. In this special issue, we would like to gather the latest results from this cross-disciplinary topic, address the overlap and discrepancies in (the neurobiology of) economic decision making found between species and identify the challenges that lie ahead in translating results from species to species, and ultimately to humans. The exclusive focus on non-human animals makes this Research Topic unique and distinct from previous special issues which covered a broader range of matters and subjects in the neurobiological analysis of decision making.

*Public Health in India* M. Arathi 2022-01-31

*Public Health in India: Policy Shifts and Trends* captures transitions in the public health debates in India from different vantage points. It marks the erosions, reflected mainly in policy changes, that have taken place at the national level in the area of public health. The analysis of selected articles attempts to understand the amnesia about the health of people that has pervaded not only the professional and the political class but also those who believe in an elitist, bio-medical perspective, limited to hi-tech interventions at the cost of a balanced view on healthcare. This volume traces the history of public health debates in India over five decades and identifies the paradigm shifts in post-Independent India through contradictory approaches by state strategies and interventions.

The transition of health policies and shifts in the state's commitment towards 'Health for All' form part of these debates. The series 'Social Change in Contemporary India' brings together key texts published in the prestigious journal Social Change, from 1971 till present times. These writings, most of which are considered canonical, address important issues in health, education, poverty and agriculture with special focus on disadvantaged groups. These writings will help readers identify key points in the history of policymaking in India and major discourses and debates and their impact.

**Special Operations Patrol Vehicles** - Leigh Neville 2011-09-20

The patrol vehicles used by Special Operations Forces in Afghanistan and Iraq vary quite dramatically between the theatres as well as amongst the Coalition members, and have been developed and upgraded to meet the demands of the deployment. Tracing the evolution of the vehicle types, from their historical precedents, through their designs to their operational developments, he discusses their advantages and disadvantages, along with their tactical employment. From the mine-protected vehicles used to counter the IED threat in Iraq, the use of Strykers as armoured raiding platforms by the US Rangers, to the civilian vehicles adapted for military service by both Coalition troops and Private Military Contractors in the

**Nutrigenomics and Nutraceuticals** - Yashwant V. Pathak 2017-09-29

Genomics and related areas of research have contributed greatly to the understanding of the cellular and molecular mechanisms underlying diet-disease relationships. In the past decade, the evidence has become stronger for a direct link between genome/epigenome damage and increased risk for adverse health outcomes. It is now exceedingly clear that micronutrients are critical as cofactors for many cellular functions, including DNA repair enzymes, methylation of CpG sequences, DNA oxidation, and/or uracil incorporation into DNA. Nutrigenomics and Nutraceuticals: Clinical Relevance and Disease Prevention brings new perspectives on disease prevention strategy based on the genomic knowledge and nutraceuticals of an individual and the diet he or she receives. This book discusses the integration and application of genetic and genomics technology into nutrition research and paves the way for the development of nutrition research programs that are aimed at the prevention and control of chronic disease through genomics-based nutritional interventions. In this book, the editors bring together a wide spectrum of nutritional scientists worldwide to contribute to the growing knowledge in the field of nutrigenomics and nutraceuticals.

Horizontal Gene Transfer - Tomás G. Villa 2019-08-13

The book focuses on the evolutionary impact of horizontal gene transfer processes on pathogenicity, environmental adaptation and biological speciation. Newly acquired genetic material has been considered as a driving force in evolution for prokaryotic genomes for many years, with recent technical developments advancing this field further. However, the extent and implications of gene transfer between prokaryotes and eukaryotes still raise controversies. This multi-authored volume introduces various means by which DNA can be exchanged, covers gene transfer between prokaryotes and their viruses as well as between bacteria and eukaryotes, such as fungi, plants and animals, and addresses the role of horizontal gene transfer in human diseases. Aspects discussed also include the relevance for virulence and drug resistance development on one hand, and for the occurrence of naturally derived antibiotics and other secondary metabolites on the other hand. This book offers new insights to anyone interested in genome evolution and the exchange of DNA between the different domains of life, the genetic toolkit for adaptation and the emergence of multidrug resistant bacteria.
